

**varmanage** — Manage variable labels, formats, and other properties

[Description](#)[Menu](#)[Syntax](#)[Remarks and examples](#)[Also see](#)

## Description

`varmanage` opens the Variables Manager. The Variables Manager allows for the sorting and filtering of variables for the purpose of setting properties on one or more variables at a time. Variable properties include the name, label, storage type, format, value label, and notes. The Variables Manager also can be used to create *varlists* for the Command window.
