Date and time functions

| | |
|--|---|
| <code>age($e_{d\text{DOB}}, e_d[, s_{nl}]$)</code> | the age in integer years on e_d for date of birth $e_{d\text{DOB}}$ with s_{nl} the nonleap-year birthday for 29feb birthdates |
| <code>age_frac($e_{d\text{DOB}}, e_d[, s_{nl}]$)</code> | the age in years, including the fractional part, on e_d for date of birth $e_{d\text{DOB}}$ with s_{nl} the nonleap-year birthday for 29feb birthdates |
| <code>birthday($e_{d\text{DOB}}, Y[, s_{nl}]$)</code> | the e_d date of the birthday in year Y for date of birth $e_{d\text{DOB}}$ with s_{nl} the nonleap-year birthday for 29feb birthdates |
| <code>bofd("cal", e_d)</code> | the e_b business date corresponding to e_d |
| <code>Cdhms(e_d, h, m, s)</code> | the e_{tC} datetime (ms. with leap seconds since 01jan1960 00:00:00.000) corresponding to e_d, h, m, s |
| <code>Chms(h, m, s)</code> | the e_{tC} datetime (ms. with leap seconds since 01jan1960 00:00:00.000) corresponding to h, m, s on 01jan1960 |
| <code>Clock($s_1, s_2[, Y]$)</code> | the e_{tC} datetime (ms. with leap seconds since 01jan1960 00:00:00.000) corresponding to s_1 based on s_2 and Y |
| <code>clock($s_1, s_2[, Y]$)</code> | the e_{tc} datetime (ms. since 01jan1960 00:00:00.000) corresponding to s_1 based on s_2 and Y |
| <code>Clockdiff(e_{tC1}, e_{tC2}, s_u)</code> | the e_{tC} datetime difference, rounded down to an integer, from e_{tC1} to e_{tC2} in s_u units of days, hours, minutes, seconds, or milliseconds |
| <code>clockdiff(e_{tc1}, e_{tc2}, s_u)</code> | the e_{tc} datetime difference, rounded down to an integer, from e_{tc1} to e_{tc2} in s_u units of days, hours, minutes, seconds, or milliseconds |
| <code>Clockdiff_frac(e_{tC1}, e_{tC2}, s_u)</code> | the e_{tC} datetime difference, including the fractional part, from e_{tC1} to e_{tC2} in s_u units of days, hours, minutes, seconds, or milliseconds |
| <code>clockdiff_frac(e_{tc1}, e_{tc2}, s_u)</code> | the e_{tc} datetime difference, including the fractional part, from e_{tc1} to e_{tc2} in s_u units of days, hours, minutes, seconds, or milliseconds |
| <code>Clockpart(e_{tC}, s_u)</code> | the integer year, month, day, hour, minute, second, or millisecond of e_{tC} with s_u specifying which time part |
| <code>clockpart(e_{tc}, s_u)</code> | the integer year, month, day, hour, minute, second, or millisecond of e_{tc} with s_u specifying which time part |

2 Functions by category

| | |
|--|--|
| <code>CmDyHms(M, D, Y, h, m, s)</code> | the e_{tC} datetime (ms. with leap seconds since 01jan1960 00:00:00.000) corresponding to M, D, Y, h, m, s |
| <code>Cofc(e_{tc})</code> | the e_{tC} datetime (ms. with leap seconds since 01jan1960 00:00:00.000) of e_{tc} (ms. without leap seconds since 01jan1960 00:00:00.000) |
| <code>cofC(e_{tC})</code> | the e_{tc} datetime (ms. without leap seconds since 01jan1960 00:00:00.000) of e_{tC} (ms. with leap seconds since 01jan1960 00:00:00.000) |
| <code>Cofd(e_d)</code> | the e_{tC} datetime (ms. with leap seconds since 01jan1960 00:00:00.000) of date e_d at time 00:00:00.000 |
| <code>cofd(e_d)</code> | the e_{tc} datetime (ms. since 01jan1960 00:00:00.000) of date e_d at time 00:00:00.000 |
| <code>daily($s_1, s_2[, Y]$)</code> | a synonym for <code>date($s_1, s_2[, Y]$)</code> |
| <code>date($s_1, s_2[, Y]$)</code> | the e_d date (days since 01jan1960) corresponding to s_1 based on s_2 and Y |
| <code>datediff($e_{d1}, e_{d2}, s_u[, s_{nl}]$)</code> | the difference, rounded down to an integer, from e_{d1} to e_{d2} in s_u units of days, months, or years with s_{nl} the nonleap-year anniversary for e_{d1} on 29feb |
| <code>datediff_frac($e_{d1}, e_{d2}, s_u[, s_{nl}]$)</code> | the difference, including the fractional part, from e_{d1} to e_{d2} in s_u units of days, months, or years with s_{nl} the nonleap-year anniversary for e_{d1} on 29feb |
| <code>datepart(e_d, s_u)</code> | the integer year, month, or day of e_d with s_u specifying year, month, or day |
| <code>day(e_d)</code> | the numeric day of the month corresponding to e_d |
| <code>daysinmonth(e_d)</code> | the number of days in the month of e_d |
| <code>dayssincelow(e_d, d)</code> | a synonym for <code>dayssinceweekday(e_d, d)</code> |
| <code>dayssinceweekday(e_d, d)</code> | the number of days until e_d since previous day-of-week d |
| <code>daysuntildow(e_d, d)</code> | a synonym for <code>daysuntilweekday(e_d, d)</code> |
| <code>daysuntilweekday(e_d, d)</code> | the number of days from e_d until next day-of-week d |
| <code>dhms(e_d, h, m, s)</code> | the e_{tc} datetime (ms. since 01jan1960 00:00:00.000) corresponding to e_d, h, m, s |
| <code>dmy(D, M, Y)</code> | the e_d date (days since 01jan1960) corresponding to D, M, Y |
| <code>dofb($e_b, "cal"$)</code> | the e_d datetime corresponding to e_b |
| <code>dofC(e_{tC})</code> | the e_d date (days since 01jan1960) of datetime e_{tC} (ms. with leap seconds since 01jan1960 00:00:00.000) |
| <code>dofc(e_{tc})</code> | the e_d date (days since 01jan1960) of datetime e_{tc} (ms. since 01jan1960 00:00:00.000) |
| <code>dofh(e_h)</code> | the e_d date (days since 01jan1960) of the start of half-year e_h |
| <code>dofm(e_m)</code> | the e_d date (days since 01jan1960) of the start of month e_m |
| <code>dofq(e_q)</code> | the e_d date (days since 01jan1960) of the start of quarter e_q |
| <code>dofw(e_w)</code> | the e_d date (days since 01jan1960) of the start of week e_w |
| <code>dofy(e_y)</code> | the e_d date (days since 01jan1960) of 01jan in year e_y |
| <code>dow(e_d)</code> | the numeric day of the week corresponding to date e_d ; 0 = Sunday, 1 = Monday, . . . , 6 = Saturday |

| | |
|--|---|
| <code>doy(e_d)</code> | the numeric day of the year corresponding to date e_d |
| <code>firstdayofmonth(e_d)</code> | the e_d date of the first day of the month of e_d |
| <code>firstdowofmonth(M, Y, d)</code> | a synonym for <code>firstweekdayofmonth(M, Y, d)</code> |
| <code>firstweekdayofmonth(M, Y, d)</code> | the e_d date of the first day-of-week d in month M of year Y |
| <code>halfyear(e_d)</code> | the numeric half of the year corresponding to date e_d |
| <code>halfyearly($s_1, s_2[, Y]$)</code> | the e_h half-yearly date (half-years since 1960h1) corresponding to s_1 based on s_2 and Y ; Y specifies <i>topyear</i> ; see <code>date()</code> |
| <code>hh(e_{tc})</code> | the hour corresponding to datetime e_{tc} (ms. since 01jan1960 00:00:00.000) |
| <code>hhC(e_{tC})</code> | the hour corresponding to datetime e_{tC} (ms. with leap seconds since 01jan1960 00:00:00.000) |
| <code>hms(h, m, s)</code> | the e_{tc} datetime (ms. since 01jan1960 00:00:00.000) corresponding to h, m, s on 01jan1960 |
| <code>hofd(e_d)</code> | the e_h half-yearly date (half years since 1960h1) containing date e_d |
| <code>hours(ms)</code> | $ms/3,600,000$ |
| <code>isleapsecond(e_{tC})</code> | 1 if e_{tC} is a leap second; otherwise, 0 |
| <code>isleapyear(Y)</code> | 1 if Y is a leap year; otherwise, 0 |
| <code>lastdayofmonth(e_d)</code> | the e_d date of the last day of the month of e_d |
| <code>lastdowofmonth(M, Y, d)</code> | a synonym for <code>lastweekdayofmonth(M, Y, d)</code> |
| <code>lastweekdayofmonth(M, Y, d)</code> | the e_d date of the last day-of-week d in month M of year Y |
| <code>mdy(M, D, Y)</code> | the e_d date (days since 01jan1960) corresponding to M, D, Y |
| <code>mdyhms(M, D, Y, h, m, s)</code> | the e_{tc} datetime (ms. since 01jan1960 00:00:00.000) corresponding to M, D, Y, h, m, s |
| <code>minutes(ms)</code> | $ms/60,000$ |
| <code>mm(e_{tc})</code> | the minute corresponding to datetime e_{tc} (ms. since 01jan1960 00:00:00.000) |
| <code>mmC(e_{tC})</code> | the minute corresponding to datetime e_{tC} (ms. with leap seconds since 01jan1960 00:00:00.000) |
| <code>mofd(e_d)</code> | the e_m monthly date (months since 1960m1) containing date e_d |
| <code>month(e_d)</code> | the numeric month corresponding to date e_d |
| <code>monthly($s_1, s_2[, Y]$)</code> | the e_m monthly date (months since 1960m1) corresponding to s_1 based on s_2 and Y ; Y specifies <i>topyear</i> ; see <code>date()</code> |
| <code>msofhours(h)</code> | $h \times 3,600,000$ |
| <code>msofminutes(m)</code> | $m \times 60,000$ |
| <code>msofseconds(s)</code> | $s \times 1,000$ |
| <code>nextbirthday($e_{d_{DOB}}, e_d[, s_{nl}]$)</code> | the e_d date of the first birthday after e_d for date of birth $e_{d_{DOB}}$ with s_{nl} the nonleap-year birthday for 29feb birthdates |
| <code>nextdow(e_d, d)</code> | a synonym for <code>nextweekday(e_d, d)</code> |
| <code>nextleapyear(Y)</code> | the first leap year after year Y |
| <code>nextweekday(e_d, d)</code> | the e_d date of the first day-of-week d after e_d |
| <code>now()</code> | the current e_{tc} datetime |

4 Functions by category

| | |
|--|--|
| <code>previousbirthday($e_{d\text{DOB}}, e_d[, s_{nl}]$)</code> | the e_d date of the birthday immediately before e_d for date of birth $e_{d\text{DOB}}$ with s_{nl} the nonleap-year birthday for 29feb birthdates |
| <code>previousdow(e_d, d)</code> | a synonym for <code>previousweekday(e_d, d)</code> |
| <code>previousleapyear(Y)</code> | the leap year immediately before year Y |
| <code>previousweekday(e_d, d)</code> | the e_d date of the last day-of-week d before e_d |
| <code>qofd(e_d)</code> | the e_q quarterly date (quarters since 1960q1) containing date e_d |
| <code>quarter(e_d)</code> | the numeric quarter of the year corresponding to date e_d |
| <code>quarterly($s_1, s_2[, Y]$)</code> | the e_q quarterly date (quarters since 1960q1) corresponding to s_1 based on s_2 and Y ; Y specifies <i>topyear</i> ; see <code>date()</code> |
| <code>seconds(ms)</code> | $ms/1,000$ |
| <code>ss(e_{tc})</code> | the second corresponding to datetime e_{tc} (ms. since 01jan1960 00:00:00.000) |
| <code>ssC(e_{tC})</code> | the second corresponding to datetime e_{tC} (ms. with leap seconds since 01jan1960 00:00:00.000) |
| <code>tC(l)</code> | convenience function to make typing dates and times in expressions easier |
| <code>tC(l)</code> | convenience function to make typing dates and times in expressions easier |
| <code>td(l)</code> | convenience function to make typing dates in expressions easier |
| <code>th(l)</code> | convenience function to make typing half-yearly dates in expressions easier |
| <code>tm(l)</code> | convenience function to make typing monthly dates in expressions easier |
| <code>today()</code> | today's e_d date |
| <code>tq(l)</code> | convenience function to make typing quarterly dates in expressions easier |
| <code>tw(l)</code> | convenience function to make typing weekly dates in expressions easier |
| <code>week(e_d)</code> | the numeric week of the year corresponding to date e_d , the %td encoded date (days since 01jan1960) |
| <code>weekly($s_1, s_2[, Y]$)</code> | the e_w weekly date (weeks since 1960w1) corresponding to s_1 based on s_2 and Y ; Y specifies <i>topyear</i> ; see <code>date()</code> |
| <code>wofd(e_d)</code> | the e_w weekly date (weeks since 1960w1) containing date e_d |
| <code>year(e_d)</code> | the numeric year corresponding to date e_d |
| <code>yearly($s_1, s_2[, Y]$)</code> | the e_y yearly date (year) corresponding to s_1 based on s_2 and Y ; Y specifies <i>topyear</i> ; see <code>date()</code> |
| <code>yh(Y, H)</code> | the e_h half-yearly date (half-years since 1960h1) corresponding to year Y , half-year H |
| <code>ym(Y, M)</code> | the e_m monthly date (months since 1960m1) corresponding to year Y , month M |
| <code>yofd(e_d)</code> | the e_y yearly date (year) containing date e_d |
| <code>yq(Y, Q)</code> | the e_q quarterly date (quarters since 1960q1) corresponding to year Y , quarter Q |
| <code>yw(Y, W)</code> | the e_w weekly date (weeks since 1960w1) corresponding to year Y , week W |

Mathematical functions

| | |
|--|---|
| <code>abs(x)</code> | the absolute value of x |
| <code>ceil(x)</code> | the unique integer n such that $n - 1 < x \leq n$; x (not “.”) if x is missing, meaning that <code>ceil(.a) = .a</code> |
| <code>cloglog(x)</code> | the complementary log-log of x |
| <code>comb(n, k)</code> | the combinatorial function $n! / \{k!(n - k)!\}$ |
| <code>digamma(x)</code> | the <code>digamma()</code> function, $d \ln \Gamma(x) / dx$ |
| <code>exp(x)</code> | the exponential function e^x |
| <code>expm1(x)</code> | $e^x - 1$ with higher precision than <code>exp(x) - 1</code> for small values of $ x $ |
| <code>floor(x)</code> | the unique integer n such that $n \leq x < n + 1$; x (not “.”) if x is missing, meaning that <code>floor(.a) = .a</code> |
| <code>int(x)</code> | the integer obtained by truncating x toward 0 (thus, <code>int(5.2) = 5</code> and <code>int(-5.8) = -5</code>); x (not “.”) if x is missing, meaning that <code>int(.a) = .a</code> |
| <code>invcloglog(x)</code> | the inverse of the complementary log-log function of x |
| <code>invlogit(x)</code> | the inverse of the logit function of x |
| <code>ln(x)</code> | the natural logarithm, $\ln(x)$ |
| <code>ln1m(x)</code> | the natural logarithm of $1 - x$ with higher precision than <code>ln(1 - x)</code> for small values of $ x $ |
| <code>ln1p(x)</code> | the natural logarithm of $1 + x$ with higher precision than <code>ln(1 + x)</code> for small values of $ x $ |
| <code>lnfactorial(n)</code> | the natural log of n factorial = $\ln(n!)$ |
| <code>lngamma(x)</code> | $\ln\{\Gamma(x)\}$ |
| <code>log(x)</code> | a synonym for <code>ln(x)</code> |
| <code>log10(x)</code> | the base-10 logarithm of x |
| <code>log1m(x)</code> | a synonym for <code>ln1m(x)</code> |
| <code>log1p(x)</code> | a synonym for <code>ln1p(x)</code> |
| <code>logit(x)</code> | the log of the odds ratio of x , $\text{logit}(x) = \ln\{x/(1 - x)\}$ |
| <code>max(x₁, x₂, ..., x_n)</code> | the maximum value of x_1, x_2, \dots, x_n |
| <code>min(x₁, x₂, ..., x_n)</code> | the minimum value of x_1, x_2, \dots, x_n |
| <code>mod(x, y)</code> | the modulus of x with respect to y |
| <code>reldif(x, y)</code> | the “relative” difference $ x - y / (y + 1)$; 0 if both arguments are the same type of extended missing value; <i>missing</i> if only one argument is missing or if the two arguments are two different types of <i>missing</i> |
| <code>round(x, y)</code> or <code>round(x)</code> | x rounded in units of y or x rounded to the nearest integer if the argument y is omitted; x (not “.”) if x is missing (meaning that <code>round(.a) = .a</code> and that <code>round(.a, y) = .a</code> if y is not missing) and if y is missing, then “.”) is returned |
| <code>sign(x)</code> | the sign of x : -1 if $x < 0$, 0 if $x = 0$, 1 if $x > 0$, or <i>missing</i> if x is missing |
| <code>sqrt(x)</code> | the square root of x |
| <code>sum(x)</code> | the running sum of x , treating missing values as zero |

`trigamma(x)` the second derivative of $\ln\text{gamma}(x) = d^2 \ln\Gamma(x)/dx^2$
`trunc(x)` a synonym for `int(x)`

Matrix functions

`cholesky(M)` the Cholesky decomposition of the matrix: if $R = \text{cholesky}(S)$, then $RR^T = S$
`coleqnumb(M,s)` the equation number of M associated with column equation s ; *missing* if the column equation cannot be found
`colnfreeparms(M)` the number of free parameters in columns of M
`colnumb(M,s)` the column number of M associated with column name s ; *missing* if the column cannot be found
`colsof(M)` the number of columns of M
`corr(M)` the correlation matrix of the variance matrix
`det(M)` the determinant of matrix M
`diag(M)` the square, diagonal matrix created from the row or column vector
`diag0cnt(M)` the number of zeros on the diagonal of M
`el(s,i,j)` $s[\text{floor}(i),\text{floor}(j)]$, the i,j element of the matrix named s ; *missing* if i or j are out of range or if matrix s does not exist
`get(systemname)` a copy of Stata internal system matrix *systemname*
`hadamard(M,N)` a matrix whose i,j element is $M[i,j] \cdot N[i,j]$ (if M and N are not the same size, this function reports a conformability error)
`I(n)` an $n \times n$ identity matrix if n is an integer; otherwise, a `round(n) × round(n)` identity matrix
`inv(M)` the inverse of the matrix M
`invsym(M)` the inverse of M if M is positive definite
`invvech(M)` a symmetric matrix formed by filling in the columns of the lower triangle from a row or column vector
`invvecp(M)` a symmetric matrix formed by filling in the columns of the upper triangle from a row or column vector
`issymmetric(M)` 1 if the matrix is symmetric; otherwise, 0
`J(r,c,z)` the $r \times c$ matrix containing elements z
`matmissing(M)` 1 if any elements of the matrix are missing; otherwise, 0
`matuniform(r,c)` the $r \times c$ matrices containing uniformly distributed pseudorandom numbers on the interval (0, 1)
`mreldif(X,Y)` the relative difference of X and Y , where the relative difference is defined as $\max_{i,j} \{|x_{ij} - y_{ij}| / (|y_{ij}| + 1)\}$
`nullmat(matname)` use with the row-join (,) and column-join (\) operators
`roweqnumb(M,s)` the equation number of M associated with row equation s ; *missing* if the row equation cannot be found
`rownfreeparms(M)` the number of free parameters in rows of M
`rownumb(M,s)` the row number of M associated with row name s ; *missing* if the row cannot be found
`rowsof(M)` the number of rows of M

| | |
|--------------------------|--|
| <code>sweep(M, i)</code> | matrix M with i th row/column swept |
| <code>trace(M)</code> | the trace of matrix M |
| <code>vec(M)</code> | a column vector formed by listing the elements of M , starting with the first column and proceeding column by column |
| <code>vecdiag(M)</code> | the row vector containing the diagonal of matrix M |
| <code>vech(M)</code> | a column vector formed by listing the lower triangle elements of M |
| <code>vecp(M)</code> | a column vector formed by listing the upper triangle elements of M |

Programming functions

| | |
|---|---|
| <code>autocode(x, n, x₀, x₁)</code> | partitions the interval from x_0 to x_1 into n equal-length intervals and returns the upper bound of the interval that contains x or the upper bound of the first or last interval if $x < x_0$ or $x > x_1$, respectively |
| <code>byteorder()</code> | 1 if your computer stores numbers by using a hilo byte order and evaluates to 2 if your computer stores numbers by using a lohi byte order |
| <code>c(name)</code> | the value of the system or constant result $c(name)$ (see [P] creturn) |
| <code>_caller()</code> | version of the program or session that invoked the currently running program; see [P] version |
| <code>chop(x, ϵ)</code> | $\text{round}(x)$ if $\text{abs}(x - \text{round}(x)) < \epsilon$; otherwise, x ; or x if x is missing |
| <code>clip(x, a, b)</code> | x if $a < x < b$, b if $x \geq b$, a if $x \leq a$, or <i>missing</i> if x is missing or if $a > b$; x if x is missing |
| <code>cond(x, a, b[, c])</code> | a if x is <i>true</i> and nonmissing, b if x is <i>false</i> , and c if x is <i>missing</i> ; a if c is not specified and x evaluates to <i>missing</i> |
| <code>e(name)</code> | the value of stored result $e(name)$; see [U] 18.8 Accessing results calculated by other programs |
| <code>e(sample)</code> | 1 if the observation is in the estimation sample and 0 otherwise |
| <code>epsdouble()</code> | the machine precision of a double-precision number |
| <code>epsfloat()</code> | the machine precision of a floating-point number |
| <code>fileexists(f)</code> | 1 if the file specified by f exists; otherwise, 0 |
| <code>fileread(f)</code> | the contents of the file specified by f |
| <code>filereaderror(s)</code> | 0 or positive integer, said value having the interpretation of a return code |
| <code>filewrite(f, s[, r])</code> | writes the string specified by s to the file specified by f and returns the number of bytes in the resulting file |
| <code>float(x)</code> | the value of x rounded to <code>float</code> precision |
| <code>fmtwidth(fmtstr)</code> | the output length of the <code>%fmt</code> contained in <code>fmtstr</code> ; <i>missing</i> if <code>fmtstr</code> does not contain a valid <code>%fmt</code> |
| <code>frval()</code> | returns values of variables stored in other frames |
| <code>_frval()</code> | programmer's version of <code>frval()</code> |
| <code>has_eprop(name)</code> | 1 if <code>name</code> appears as a word in <code>e(properties)</code> ; otherwise, 0 |

| | |
|---|--|
| <code>inlist(z,a,b,...)</code> | 1 if z is a member of the remaining arguments; otherwise, 0 |
| <code>inrange(z,a,b)</code> | 1 if it is known that $a \leq z \leq b$; otherwise, 0 |
| <code>irecode(x,x₁,...,x_n)</code> | <i>missing</i> if x is missing or x_1, \dots, x_n is not weakly increasing; 0 if $x \leq x_1$; 1 if $x_1 < x \leq x_2$; 2 if $x_2 < x \leq x_3$; ...; n if $x > x_n$ |
| <code>matrix(exp)</code> | restricts name interpretation to scalars and matrices; see scalar() |
| <code>maxbyte()</code> | the largest value that can be stored in storage type <code>byte</code> |
| <code>maxdouble()</code> | the largest value that can be stored in storage type <code>double</code> |
| <code>maxfloat()</code> | the largest value that can be stored in storage type <code>float</code> |
| <code>maxint()</code> | the largest value that can be stored in storage type <code>int</code> |
| <code>maxlong()</code> | the largest value that can be stored in storage type <code>long</code> |
| <code>mi(x₁,x₂,...,x_n)</code> | a synonym for missing(x₁,x₂,...,x_n) |
| <code>minbyte()</code> | the smallest value that can be stored in storage type <code>byte</code> |
| <code>mindouble()</code> | the smallest value that can be stored in storage type <code>double</code> |
| <code>minfloat()</code> | the smallest value that can be stored in storage type <code>float</code> |
| <code>minint()</code> | the smallest value that can be stored in storage type <code>int</code> |
| <code>minlong()</code> | the smallest value that can be stored in storage type <code>long</code> |
| <code>missing(x₁,x₂,...,x_n)</code> | 1 if any x_i evaluates to <i>missing</i> ; otherwise, 0 |
| <code>r(name)</code> | the value of the stored result <code>r(name)</code> ; see [U] 18.8 Accessing results calculated by other programs |
| <code>recode(x,x₁,...,x_n)</code> | <i>missing</i> if x_1, x_2, \dots, x_n is not weakly increasing; x if x is missing; x_1 if $x \leq x_1$; x_2 if $x \leq x_2$, ...; otherwise, x_n if $x > x_1, x_2, \dots, x_{n-1}$. $x_i \geq .$ is interpreted as $x_i = +\infty$ |
| <code>replay()</code> | 1 if the first nonblank character of local macro ‘0’ is a comma, or if ‘0’ is empty |
| <code>return(name)</code> | the value of the to-be-stored result <code>r(name)</code> ; see [P] return |
| <code>s(name)</code> | the value of stored result <code>s(name)</code> ; see [U] 18.8 Accessing results calculated by other programs |
| <code>scalar(exp)</code> | restricts name interpretation to scalars and matrices |
| <code>smallestdouble()</code> | the smallest double-precision number greater than zero |

Random-number functions

| | |
|------------------------------|---|
| <code>rbeta(a,b)</code> | beta(a,b) random variates, where a and b are the beta distribution shape parameters |
| <code>rbinomial(n,p)</code> | binomial(n,p) random variates, where n is the number of trials and p is the success probability |
| <code>rcauchy(a,b)</code> | Cauchy(a,b) random variates, where a is the location parameter and b is the scale parameter |
| <code>rchi2(df)</code> | χ^2 , with df degrees of freedom, random variates |
| <code>rexponential(b)</code> | exponential random variates with scale b |
| <code>rgamma(a,b)</code> | gamma(a,b) random variates, where a is the gamma shape parameter and b is the scale parameter |

| | |
|--|---|
| <code>rhypergeometric(<i>N, K, n</i>)</code> | hypergeometric random variates |
| <code>rigaussian(<i>m, a</i>)</code> | inverse Gaussian random variates with mean <i>m</i> and shape parameter <i>a</i> |
| <code>rlaplace(<i>m, b</i>)</code> | Laplace(<i>m, b</i>) random variates with mean <i>m</i> and scale parameter <i>b</i> |
| <code>rlogistic()</code> | logistic variates with mean 0 and standard deviation $\pi/\sqrt{3}$ |
| <code>rlogistic(<i>s</i>)</code> | logistic variates with mean 0, scale <i>s</i> , and standard deviation $s\pi/\sqrt{3}$ |
| <code>rlogistic(<i>m, s</i>)</code> | logistic variates with mean <i>m</i> , scale <i>s</i> , and standard deviation $s\pi/\sqrt{3}$ |
| <code>rnbinomial(<i>n, p</i>)</code> | negative binomial random variates |
| <code>rnormal()</code> | standard normal (Gaussian) random variates, that is, variates from a normal distribution with a mean of 0 and a standard deviation of 1 |
| <code>rnormal(<i>m</i>)</code> | normal(<i>m, 1</i>) (Gaussian) random variates, where <i>m</i> is the mean and the standard deviation is 1 |
| <code>rnormal(<i>m, s</i>)</code> | normal(<i>m, s</i>) (Gaussian) random variates, where <i>m</i> is the mean and <i>s</i> is the standard deviation |
| <code>rpoisson(<i>m</i>)</code> | Poisson(<i>m</i>) random variates, where <i>m</i> is the distribution mean |
| <code>rt(<i>df</i>)</code> | Student's <i>t</i> random variates, where <i>df</i> is the degrees of freedom |
| <code>runiform()</code> | uniformly distributed random variates over the interval (0, 1) |
| <code>runiform(<i>a, b</i>)</code> | uniformly distributed random variates over the interval (<i>a, b</i>) |
| <code>runiformint(<i>a, b</i>)</code> | uniformly distributed random integer variates on the interval [<i>a, b</i>] |
| <code>rweibull(<i>a, b</i>)</code> | Weibull variates with shape <i>a</i> and scale <i>b</i> |
| <code>rweibull(<i>a, b, g</i>)</code> | Weibull variates with shape <i>a</i> , scale <i>b</i> , and location <i>g</i> |
| <code>rweibullph(<i>a, b</i>)</code> | Weibull (proportional hazards) variates with shape <i>a</i> and scale <i>b</i> |
| <code>rweibullph(<i>a, b, g</i>)</code> | Weibull (proportional hazards) variates with shape <i>a</i> , scale <i>b</i> , and location <i>g</i> |

Selecting time-span functions

| | |
|---|--|
| <code>tin(<i>d₁, d₂</i>)</code> | <i>true</i> if $d_1 \leq t \leq d_2$, where <i>t</i> is the time variable previously <code>tsset</code> |
| <code>twithin(<i>d₁, d₂</i>)</code> | <i>true</i> if $d_1 < t < d_2$, where <i>t</i> is the time variable previously <code>tsset</code> |

Statistical functions

| | |
|---|---|
| <code>betaden(<i>a, b, x</i>)</code> | the probability density of the beta distribution, where <i>a</i> and <i>b</i> are the shape parameters; 0 if $x < 0$ or $x > 1$ |
| <code>binomial(<i>n, k, θ</i>)</code> | the probability of observing <code>floor(k)</code> or fewer successes in <code>floor(n)</code> trials when the probability of a success on one trial is θ ; 0 if $k < 0$; or 1 if $k > n$ |
| <code>binomialp(<i>n, k, p</i>)</code> | the probability of observing <code>floor(k)</code> successes in <code>floor(n)</code> trials when the probability of a success on one trial is <i>p</i> |
| <code>binomialtail(<i>n, k, θ</i>)</code> | the probability of observing <code>floor(k)</code> or more successes in <code>floor(n)</code> trials when the probability of a success on one trial is θ ; 1 if $k < 0$; or 0 if $k > n$ |

| | |
|--|---|
| <code>binormal(<i>h, k, ρ</i>)</code> | the joint cumulative distribution $\Phi(h, k, \rho)$ of bivariate normal with correlation ρ |
| <code>cauchy(<i>a, b, x</i>)</code> | the cumulative Cauchy distribution with location parameter a and scale parameter b |
| <code>cauchyden(<i>a, b, x</i>)</code> | the probability density of the Cauchy distribution with location parameter a and scale parameter b |
| <code>cauchytail(<i>a, b, x</i>)</code> | the reverse cumulative (upper tail or survivor) Cauchy distribution with location parameter a and scale parameter b |
| <code>chi2(<i>df, x</i>)</code> | the cumulative χ^2 distribution with df degrees of freedom; 0 if $x < 0$ |
| <code>chi2den(<i>df, x</i>)</code> | the probability density of the χ^2 distribution with df degrees of freedom; 0 if $x < 0$ |
| <code>chi2tail(<i>df, x</i>)</code> | the reverse cumulative (upper tail or survivor) χ^2 distribution with df degrees of freedom; 1 if $x < 0$ |
| <code>dgammapda(<i>a, x</i>)</code> | $\frac{\partial P(a, x)}{\partial a}$, where $P(a, x) = \text{gammap}(a, x)$; 0 if $x < 0$ |
| <code>dgammapdada(<i>a, x</i>)</code> | $\frac{\partial^2 P(a, x)}{\partial a^2}$, where $P(a, x) = \text{gammap}(a, x)$; 0 if $x < 0$ |
| <code>dgammapdadx(<i>a, x</i>)</code> | $\frac{\partial^2 P(a, x)}{\partial a \partial x}$, where $P(a, x) = \text{gammap}(a, x)$; 0 if $x < 0$ |
| <code>dgammapdx(<i>a, x</i>)</code> | $\frac{\partial P(a, x)}{\partial x}$, where $P(a, x) = \text{gammap}(a, x)$; 0 if $x < 0$ |
| <code>dgammapdxdx(<i>a, x</i>)</code> | $\frac{\partial^2 P(a, x)}{\partial x^2}$, where $P(a, x) = \text{gammap}(a, x)$; 0 if $x < 0$ |
| <code>dunnettprob(<i>k, df, x</i>)</code> | the cumulative multiple range distribution that is used in Dunnett's multiple-comparison method with k ranges and df degrees of freedom; 0 if $x < 0$ |
| <code>exponential(<i>b, x</i>)</code> | the cumulative exponential distribution with scale b |
| <code>exponentialden(<i>b, x</i>)</code> | the probability density function of the exponential distribution with scale b |
| <code>exponentialtail(<i>b, x</i>)</code> | the reverse cumulative exponential distribution with scale b |
| <code>F(<i>df₁, df₂, f</i>)</code> | the cumulative F distribution with df_1 numerator and df_2 denominator degrees of freedom: $F(df_1, df_2, f) = \int_0^f \text{Fden}(df_1, df_2, t) dt$; 0 if $f < 0$ |
| <code>Fden(<i>df₁, df₂, f</i>)</code> | the probability density function of the F distribution with df_1 numerator and df_2 denominator degrees of freedom; 0 if $f < 0$ |
| <code>Ftail(<i>df₁, df₂, f</i>)</code> | the reverse cumulative (upper tail or survivor) F distribution with df_1 numerator and df_2 denominator degrees of freedom; 1 if $f < 0$ |
| <code>gammaden(<i>a, b, g, x</i>)</code> | the probability density function of the gamma distribution; 0 if $x < g$ |
| <code>gammap(<i>a, x</i>)</code> | the cumulative gamma distribution with shape parameter a ; 0 if $x < 0$ |
| <code>gammaptail(<i>a, x</i>)</code> | the reverse cumulative (upper tail or survivor) gamma distribution with shape parameter a ; 1 if $x < 0$ |
| <code>hypergeometric(<i>N, K, n, k</i>)</code> | the cumulative probability of the hypergeometric distribution |
| <code>hypergeometricp(<i>N, K, n, k</i>)</code> | the hypergeometric probability of k successes out of a sample of size n , from a population of size N containing K elements that have the attribute of interest |
| <code>ibeta(<i>a, b, x</i>)</code> | the cumulative beta distribution with shape parameters a and b ; 0 if $x < 0$; or 1 if $x > 1$ |

| | |
|--------------------------------------|---|
| <code>ibetatail(a,b,x)</code> | the reverse cumulative (upper tail or survivor) beta distribution with shape parameters a and b ; 1 if $x < 0$; or 0 if $x > 1$ |
| <code>igaussian(m,a,x)</code> | the cumulative inverse Gaussian distribution with mean m and shape parameter a ; 0 if $x \leq 0$ |
| <code>igaussianden(m,a,x)</code> | the probability density of the inverse Gaussian distribution with mean m and shape parameter a ; 0 if $x \leq 0$ |
| <code>igaussiantail(m,a,x)</code> | the reverse cumulative (upper tail or survivor) inverse Gaussian distribution with mean m and shape parameter a ; 1 if $x \leq 0$ |
| <code>invbinomial(n,k,p)</code> | the inverse of the cumulative binomial; that is, θ (θ = probability of success on one trial) such that the probability of observing <code>floor(k)</code> or fewer successes in <code>floor(n)</code> trials is p |
| <code>invbinomialtail(n,k,p)</code> | the inverse of the right cumulative binomial; that is, θ (θ = probability of success on one trial) such that the probability of observing <code>floor(k)</code> or more successes in <code>floor(n)</code> trials is p |
| <code>invcauchy(a,b,p)</code> | the inverse of <code>cauchy()</code> : if <code>cauchy(a,b,x) = p</code> , then <code>invcauchy(a,b,p) = x</code> |
| <code>invcauchytail(a,b,p)</code> | the inverse of <code>cauchytail()</code> : if <code>cauchytail(a,b,x) = p</code> , then <code>invcauchytail(a,b,p) = x</code> |
| <code>invchi2(df,p)</code> | the inverse of <code>chi2()</code> : if <code>chi2(df,x) = p</code> , then <code>invchi2(df,p) = x</code> |
| <code>invchi2tail(df,p)</code> | the inverse of <code>chi2tail()</code> : if <code>chi2tail(df,x) = p</code> , then <code>invchi2tail(df,p) = x</code> |
| <code>invdunnettprob(k,df,p)</code> | the inverse cumulative multiple range distribution that is used in Dunnett's multiple-comparison method with k ranges and df degrees of freedom |
| <code>invexponential(b,p)</code> | the inverse cumulative exponential distribution with scale b : if <code>exponential(b,x) = p</code> , then <code>invexponential(b,p) = x</code> |
| <code>invexponentialtail(b,p)</code> | the inverse reverse cumulative exponential distribution with scale b : if <code>exponentialtail(b,x) = p</code> , then <code>invexponentialtail(b,p) = x</code> |
| <code>invF(df1,df2,p)</code> | the inverse cumulative F distribution: if <code>F(df1,df2,f) = p</code> , then <code>invF(df1,df2,p) = f</code> |
| <code>invFtail(df1,df2,p)</code> | the inverse reverse cumulative (upper tail or survivor) F distribution: if <code>Ftail(df1,df2,f) = p</code> , then <code>invFtail(df1,df2,p) = f</code> |
| <code>invgammap(a,p)</code> | the inverse cumulative gamma distribution: if <code>gammap(a,x) = p</code> , then <code>invgammap(a,p) = x</code> |
| <code>invgammaptail(a,p)</code> | the inverse reverse cumulative (upper tail or survivor) gamma distribution: if <code>gammaptail(a,x) = p</code> , then <code>invgammaptail(a,p) = x</code> |
| <code>invibeta(a,b,p)</code> | the inverse cumulative beta distribution: if <code>ibeta(a,b,x) = p</code> , then <code>invibeta(a,b,p) = x</code> |
| <code>invibetatail(a,b,p)</code> | the inverse reverse cumulative (upper tail or survivor) beta distribution: if <code>ibetatail(a,b,x) = p</code> , then <code>invibetatail(a,b,p) = x</code> |
| <code>invigaussian(m,a,p)</code> | the inverse of <code>igaussian()</code> : if <code>igaussian(m,a,x) = p</code> , then <code>invigaussian(m,a,p) = x</code> |
| <code>invigaussiantail(m,a,p)</code> | the inverse of <code>igaussiantail()</code> : if <code>igaussiantail(m,a,x) = p</code> , then <code>invigaussiantail(m,a,p) = x</code> |

| | |
|--|---|
| <code>invlaplace(m, b, p)</code> | the inverse of <code>laplace()</code> : if <code>laplace(m, b, x) = p</code> , then <code>invlaplace(m, b, p) = x</code> |
| <code>invlaplacetail(m, b, p)</code> | the inverse of <code>laplacetail()</code> : if <code>laplacetail(m, b, x) = p</code> , then <code>invlaplacetail(m, b, p) = x</code> |
| <code>invlogistic(p)</code> | the inverse cumulative logistic distribution: if <code>logistic(x) = p</code> , then <code>invlogistic(p) = x</code> |
| <code>invlogistic(s, p)</code> | the inverse cumulative logistic distribution: if <code>logistic(s, x) = p</code> , then <code>invlogistic(s, p) = x</code> |
| <code>invlogistic(m, s, p)</code> | the inverse cumulative logistic distribution: if <code>logistic(m, s, x) = p</code> , then <code>invlogistic(m, s, p) = x</code> |
| <code>invlogistictail(p)</code> | the inverse reverse cumulative logistic distribution: if <code>logistictail(x) = p</code> , then <code>invlogistictail(p) = x</code> |
| <code>invlogistictail(s, p)</code> | the inverse reverse cumulative logistic distribution: if <code>logistictail(s, x) = p</code> , then <code>invlogistictail(s, p) = x</code> |
| <code>invlogistictail(m, s, p)</code> | the inverse reverse cumulative logistic distribution: if <code>logistictail(m, s, x) = p</code> , then <code>invlogistictail(m, s, p) = x</code> |
| <code>invnbinomial(n, k, q)</code> | the value of the negative binomial parameter, p , such that <code>q = nbinomial(n, k, p)</code> |
| <code>invnbinomialtail(n, k, q)</code> | the value of the negative binomial parameter, p , such that <code>q = nbinomialtail(n, k, p)</code> |
| <code>invnchi2(df, np, p)</code> | the inverse cumulative noncentral χ^2 distribution: if <code>nchi2(df, np, x) = p</code> , then <code>invnchi2(df, np, p) = x</code> |
| <code>invnchi2tail(df, np, p)</code> | the inverse reverse cumulative (upper tail or survivor) noncentral χ^2 distribution: if <code>nchi2tail(df, np, x) = p</code> , then <code>invnchi2tail(df, np, p) = x</code> |
| <code>invnF(df_1, df_2, np, p)</code> | the inverse cumulative noncentral F distribution: if <code>nF(df_1, df_2, np, f) = p</code> , then <code>invnF(df_1, df_2, np, p) = f</code> |
| <code>invnFtail(df_1, df_2, np, p)</code> | the inverse reverse cumulative (upper tail or survivor) noncentral F distribution: if <code>nFtail(df_1, df_2, np, f) = p</code> , then <code>invnFtail(df_1, df_2, np, p) = f</code> |
| <code>invnibeta(a, b, np, p)</code> | the inverse cumulative noncentral beta distribution: if <code>nibeta(a, b, np, x) = p</code> , then <code>invnibeta(a, b, np, p) = x</code> |
| <code>invnormal(p)</code> | the inverse cumulative standard normal distribution: if <code>normal(z) = p</code> , then <code>invnormal(p) = z</code> |
| <code>invnt(df, np, p)</code> | the inverse cumulative noncentral Student's t distribution: if <code>nt(df, np, t) = p</code> , then <code>invnt(df, np, p) = t</code> |
| <code>invnttail(df, np, p)</code> | the inverse reverse cumulative (upper tail or survivor) noncentral Student's t distribution: if <code>nttail(df, np, t) = p</code> , then <code>invnttail(df, np, p) = t</code> |
| <code>invpoisson(k, p)</code> | the Poisson mean such that the cumulative Poisson distribution evaluated at k is p : if <code>poisson(m, k) = p</code> , then <code>invpoisson(k, p) = m</code> |
| <code>invpoissontail(k, q)</code> | the Poisson mean such that the reverse cumulative Poisson distribution evaluated at k is q : if <code>poissontail(m, k) = q</code> , then <code>invpoissontail(k, q) = m</code> |
| <code>invt(df, p)</code> | the inverse cumulative Student's t distribution: if <code>t(df, t) = p</code> , then <code>invt(df, p) = t</code> |

| | |
|--|---|
| <code>invttail(df,p)</code> | the inverse reverse cumulative (upper tail or survivor) Student's t distribution: if <code>ttail(df,t) = p</code> , then <code>invttail(df,p) = t</code> |
| <code>invtukeyprob(k,df,p)</code> | the inverse cumulative Tukey's Studentized range distribution with k ranges and df degrees of freedom |
| <code>invweibull(a,b,p)</code> | the inverse cumulative Weibull distribution with shape a and scale b : if <code>weibull(a,b,x) = p</code> , then <code>invweibull(a,b,p) = x</code> |
| <code>invweibull(a,b,g,p)</code> | the inverse cumulative Weibull distribution with shape a , scale b , and location g : if <code>weibull(a,b,g,x) = p</code> , then <code>invweibull(a,b,g,p) = x</code> |
| <code>invweibullph(a,b,p)</code> | the inverse cumulative Weibull (proportional hazards) distribution with shape a and scale b : if <code>weibullph(a,b,x) = p</code> , then <code>invweibullph(a,b,p) = x</code> |
| <code>invweibullph(a,b,g,p)</code> | the inverse cumulative Weibull (proportional hazards) distribution with shape a , scale b , and location g : if <code>weibullph(a,b,g,x) = p</code> , then <code>invweibullph(a,b,g,p) = x</code> |
| <code>invweibullphtail(a,b,p)</code> | the inverse reverse cumulative Weibull (proportional hazards) distribution with shape a and scale b : if <code>weibullphtail(a,b,x) = p</code> , then <code>invweibullphtail(a,b,p) = x</code> |
| <code>invweibullphtail(a,b,g,p)</code> | the inverse reverse cumulative Weibull (proportional hazards) distribution with shape a , scale b , and location g : if <code>weibullphtail(a,b,g,x) = p</code> , then <code>invweibullphtail(a,b,g,p) = x</code> |
| <code>invweibulltail(a,b,p)</code> | the inverse reverse cumulative Weibull distribution with shape a and scale b : if <code>weibulltail(a,b,x) = p</code> , then <code>invweibulltail(a,b,p) = x</code> |
| <code>invweibulltail(a,b,g,p)</code> | the inverse reverse cumulative Weibull distribution with shape a , scale b , and location g : if <code>weibulltail(a,b,g,x) = p</code> , then <code>invweibulltail(a,b,g,p) = x</code> |
| <code>laplace(m,b,x)</code> | the cumulative Laplace distribution with mean m and scale parameter b |
| <code>laplaceden(m,b,x)</code> | the probability density of the Laplace distribution with mean m and scale parameter b |
| <code>laplacetail(m,b,x)</code> | the reverse cumulative (upper tail or survivor) Laplace distribution with mean m and scale parameter b |
| <code>lncauchyden(a,b,x)</code> | the natural logarithm of the density of the Cauchy distribution with location parameter a and scale parameter b |
| <code>lnigammaden(a,b,x)</code> | the natural logarithm of the inverse gamma density, where a is the shape parameter and b is the scale parameter |
| <code>lnigaussanden(m,a,x)</code> | the natural logarithm of the inverse Gaussian density with mean m and shape parameter a |
| <code>lniwishartden(df,V,X)</code> | the natural logarithm of the density of the inverse Wishart distribution; missing if $df \leq n - 1$ |
| <code>lnlaplaceden(m,b,x)</code> | the natural logarithm of the density of the Laplace distribution with mean m and scale parameter b |
| <code>lnmvnormalden(M,V,X)</code> | the natural logarithm of the multivariate normal density |
| <code>lnnormal(z)</code> | the natural logarithm of the cumulative standard normal distribution |
| <code>lnnormalden(z)</code> | the natural logarithm of the standard normal density, $N(0,1)$ |

| | |
|---|---|
| <code>lnnormalden(x, σ)</code> | the natural logarithm of the normal density with mean 0 and standard deviation σ |
| <code>lnnormalden(x, μ, σ)</code> | the natural logarithm of the normal density with mean μ and standard deviation σ , $N(\mu, \sigma^2)$ |
| <code>lnwishartden(df, V, X)</code> | the natural logarithm of the density of the Wishart distribution; missing if $df \leq n - 1$ |
| <code>logistic(x)</code> | the cumulative logistic distribution with mean 0 and standard deviation $\pi/\sqrt{3}$ |
| <code>logistic(s, x)</code> | the cumulative logistic distribution with mean 0, scale s , and standard deviation $s\pi/\sqrt{3}$ |
| <code>logistic(m, s, x)</code> | the cumulative logistic distribution with mean m , scale s , and standard deviation $s\pi/\sqrt{3}$ |
| <code>logisticden(x)</code> | the density of the logistic distribution with mean 0 and standard deviation $\pi/\sqrt{3}$ |
| <code>logisticden(s, x)</code> | the density of the logistic distribution with mean 0, scale s , and standard deviation $s\pi/\sqrt{3}$ |
| <code>logisticden(m, s, x)</code> | the density of the logistic distribution with mean m , scale s , and standard deviation $s\pi/\sqrt{3}$ |
| <code>logistictail(x)</code> | the reverse cumulative logistic distribution with mean 0 and standard deviation $\pi/\sqrt{3}$ |
| <code>logistictail(s, x)</code> | the reverse cumulative logistic distribution with mean 0, scale s , and standard deviation $s\pi/\sqrt{3}$ |
| <code>logistictail(m, s, x)</code> | the reverse cumulative logistic distribution with mean m , scale s , and standard deviation $s\pi/\sqrt{3}$ |
| <code>nbetaden(a, b, np, x)</code> | the probability density function of the noncentral beta distribution; 0 if $x < 0$ or $x > 1$ |
| <code>nbinomial(n, k, p)</code> | the cumulative probability of the negative binomial distribution |
| <code>nbinomialp(n, k, p)</code> | the negative binomial probability |
| <code>nbinomialtail(n, k, p)</code> | the reverse cumulative probability of the negative binomial distribution |
| <code>nchi2(df, np, x)</code> | the cumulative noncentral χ^2 distribution; 0 if $x < 0$ |
| <code>nchi2den(df, np, x)</code> | the probability density of the noncentral χ^2 distribution; 0 if $x < 0$ |
| <code>nchi2tail(df, np, x)</code> | the reverse cumulative (upper tail or survivor) noncentral χ^2 distribution; 1 if $x < 0$ |
| <code>nF(df_1, df_2, np, f)</code> | the cumulative noncentral F distribution with df_1 numerator and df_2 denominator degrees of freedom and noncentrality parameter np ; 0 if $f < 0$ |
| <code>nFden(df_1, df_2, np, f)</code> | the probability density function of the noncentral F distribution with df_1 numerator and df_2 denominator degrees of freedom and noncentrality parameter np ; 0 if $f < 0$ |
| <code>nFtail(df_1, df_2, np, f)</code> | the reverse cumulative (upper tail or survivor) noncentral F distribution with df_1 numerator and df_2 denominator degrees of freedom and noncentrality parameter np ; 1 if $f < 0$ |
| <code>nibeta(a, b, np, x)</code> | the cumulative noncentral beta distribution; 0 if $x < 0$; or 1 if $x > 1$ |
| <code>normal(z)</code> | the cumulative standard normal distribution |

| | |
|-------------------------------------|---|
| <code>normalden(z)</code> | the standard normal density, $N(0, 1)$ |
| <code>normalden(x,σ)</code> | the normal density with mean 0 and standard deviation σ |
| <code>normalden(x,μ,σ)</code> | the normal density with mean μ and standard deviation σ , $N(\mu, \sigma^2)$ |
| <code>npnchi2(df,x,p)</code> | the noncentrality parameter, np , for noncentral χ^2 : if $nchi2(df, np, x) = p$, then $npnchi2(df, x, p) = np$ |
| <code>npnF(df1,df2,f,p)</code> | the noncentrality parameter, np , for the noncentral F : if $nF(df_1, df_2, np, f) = p$, then $npnF(df_1, df_2, f, p) = np$ |
| <code>npnt(df,t,p)</code> | the noncentrality parameter, np , for the noncentral Student's t distribution: if $nt(df, np, t) = p$, then $npnt(df, t, p) = np$ |
| <code>nt(df,np,t)</code> | the cumulative noncentral Student's t distribution with df degrees of freedom and noncentrality parameter np |
| <code>ntden(df,np,t)</code> | the probability density function of the noncentral Student's t distribution with df degrees of freedom and noncentrality parameter np |
| <code>nttail(df,np,t)</code> | the reverse cumulative (upper tail or survivor) noncentral Student's t distribution with df degrees of freedom and noncentrality parameter np |
| <code>poisson(m,k)</code> | the probability of observing <code>floor(k)</code> or fewer outcomes that are distributed as Poisson with mean m |
| <code>poissonp(m,k)</code> | the probability of observing <code>floor(k)</code> outcomes that are distributed as Poisson with mean m |
| <code>poisontail(m,k)</code> | the probability of observing <code>floor(k)</code> or more outcomes that are distributed as Poisson with mean m |
| <code>t(df,t)</code> | the cumulative Student's t distribution with df degrees of freedom |
| <code>tten(df,t)</code> | the probability density function of Student's t distribution |
| <code>ttail(df,t)</code> | the reverse cumulative (upper tail or survivor) Student's t distribution; the probability $T > t$ |
| <code>tukeyprob(k,df,x)</code> | the cumulative Tukey's Studentized range distribution with k ranges and df degrees of freedom; 0 if $x < 0$ |
| <code>weibull(a,b,x)</code> | the cumulative Weibull distribution with shape a and scale b |
| <code>weibull(a,b,g,x)</code> | the cumulative Weibull distribution with shape a , scale b , and location g |
| <code>weibullden(a,b,x)</code> | the probability density function of the Weibull distribution with shape a and scale b |
| <code>weibullden(a,b,g,x)</code> | the probability density function of the Weibull distribution with shape a , scale b , and location g |
| <code>weibullph(a,b,x)</code> | the cumulative Weibull (proportional hazards) distribution with shape a and scale b |
| <code>weibullph(a,b,g,x)</code> | the cumulative Weibull (proportional hazards) distribution with shape a , scale b , and location g |
| <code>weibullphden(a,b,x)</code> | the probability density function of the Weibull (proportional hazards) distribution with shape a and scale b |
| <code>weibullphden(a,b,g,x)</code> | the probability density function of the Weibull (proportional hazards) distribution with shape a , scale b , and location g |
| <code>weibullphtail(a,b,x)</code> | the reverse cumulative Weibull (proportional hazards) distribution with shape a and scale b |
| <code>weibullphtail(a,b,g,x)</code> | the reverse cumulative Weibull (proportional hazards) distribution with shape a , scale b , and location g |

| | |
|-----------------------------------|---|
| <code>weibulltail(a,b,x)</code> | the reverse cumulative Weibull distribution with shape a and scale b |
| <code>weibulltail(a,b,g,x)</code> | the reverse cumulative Weibull distribution with shape a , scale b , and location g |

String functions

| | |
|--|---|
| <code>abbrev(s,n)</code> | name s , abbreviated to a length of n |
| <code>char(n)</code> | the character corresponding to ASCII or extended ASCII code n ; "" if n is not in the domain |
| <code>collatorlocale(loc,type)</code> | the most closely related locale supported by ICU from loc if $type$ is 1; the actual locale where the collation data comes from if $type$ is 2 |
| <code>collatorversion(loc)</code> | the version string of a collator based on locale loc |
| <code>indexnot(s₁,s₂)</code> | the position in ASCII string s_1 of the first character of s_1 not found in ASCII string s_2 , or 0 if all characters of s_1 are found in s_2 |
| <code>plural(n,s)</code> | the plural of s if $n \neq \pm 1$ |
| <code>plural(n,s₁,s₂)</code> | the plural of s_1 , as modified by or replaced with s_2 , if $n \neq \pm 1$ |
| <code>real(s)</code> | s converted to numeric or <i>missing</i> |
| <code>regexcapture(n)</code> | subexpression n from a previous <code>regexpr()</code> or <code>regexmatch()</code> match |
| <code>regexcapturenamed(grp)</code> | subexpression corresponding to matching group named grp in regular expression from a previous <code>regexpr()</code> or <code>regexmatch()</code> match |
| <code>regexpr(s,re)</code> | a match of a regular expression, which evaluates to 1 if regular expression re is satisfied by the ASCII string s ; otherwise, 0 |
| <code>regexmatch(s,re[,noc[,std[,nlalt]]])</code> | a match of a regular expression, which evaluates to 1 if regular expression re is satisfied by the ASCII string s ; otherwise, 0 |
| <code>regexpr(s₁,re,s₂)</code> | replaces the first substring within ASCII string s_1 that matches re with ASCII string s_2 and returns the resulting string |
| <code>regexreplace(s₁,re,s₂[,noc[,fmt[,std[,nlalt]]]])</code> | replaces the first substring within ASCII string s_1 that matches re with ASCII string s_2 and returns the resulting string |
| <code>regexreplaceall(s₁,re,s₂[,noc[,fmt[,std[,nlalt]]]])</code> | replaces all substrings within ASCII string s_1 that match re with ASCII string s_2 and returns the resulting string |
| <code>regexs(n)</code> | subexpression n from a previous <code>regexpr()</code> or <code>regexmatch()</code> match, where $0 \leq n < 10$ |
| <code>soundex(s)</code> | the soundex code for a string, s |
| <code>soundex_nara(s)</code> | the U.S. Census soundex code for a string, s |
| <code>strcat(s₁,s₂)</code> | there is no <code>strcat()</code> function; instead the addition operator is used to concatenate strings |
| <code>strdup(s₁,n)</code> | there is no <code>strdup()</code> function; instead the multiplication operator is used to create multiple copies of strings |
| <code>string(n)</code> | a synonym for <code>stroofreal(n)</code> |

| | |
|--|--|
| <code>string(<i>n</i>,<i>s</i>)</code> | a synonym for <code>strofreal(<i>n</i>,<i>s</i>)</code> |
| <code>stritrim(<i>s</i>)</code> | <i>s</i> with multiple, consecutive internal blanks (ASCII space character <code>char(32)</code>) collapsed to one blank |
| <code>strlen(<i>s</i>)</code> | the number of characters in ASCII <i>s</i> or length in bytes |
| <code>strlower(<i>s</i>)</code> | lowercase ASCII characters in string <i>s</i> |
| <code>strltrim(<i>s</i>)</code> | <i>s</i> without leading blanks (ASCII space character <code>char(32)</code>) |
| <code>strmatch(<i>s</i>₁,<i>s</i>₂)</code> | 1 if <i>s</i> ₁ matches the pattern <i>s</i> ₂ ; otherwise, 0 |
| <code>strofreal(<i>n</i>)</code> | <i>n</i> converted to a string |
| <code>strofreal(<i>n</i>,<i>s</i>)</code> | <i>n</i> converted to a string using the specified display format |
| <code>strpos(<i>s</i>₁,<i>s</i>₂)</code> | the position in <i>s</i> ₁ at which <i>s</i> ₂ is first found, 0 if <i>s</i> ₂ does not occur, and 1 if <i>s</i> ₂ is empty |
| <code>strproper(<i>s</i>)</code> | a string with the first ASCII letter and any other letters immediately following characters that are not letters capitalized; all other ASCII letters converted to lowercase |
| <code>strreverse(<i>s</i>)</code> | the reverse of ASCII string <i>s</i> |
| <code>strrpos(<i>s</i>₁,<i>s</i>₂)</code> | the position in <i>s</i> ₁ at which <i>s</i> ₂ is last found, 0 if <i>s</i> ₂ does not occur, and 1 if <i>s</i> ₂ is empty |
| <code>strrtrim(<i>s</i>)</code> | <i>s</i> without trailing blanks (ASCII space character <code>char(32)</code>) |
| <code>strtoname(<i>s</i>[,<i>p</i>])</code> | <i>s</i> translated into a Stata 13 compatible name |
| <code>strtrim(<i>s</i>)</code> | <i>s</i> without leading and trailing blanks (ASCII space character <code>char(32)</code>); equivalent to <code>strltrim(strrtrim(<i>s</i>))</code> |
| <code>strupper(<i>s</i>)</code> | uppercase ASCII characters in string <i>s</i> |
| <code>subinstr(<i>s</i>₁,<i>s</i>₂,<i>s</i>₃,<i>n</i>)</code> | <i>s</i> ₁ , where the first <i>n</i> occurrences in <i>s</i> ₁ of <i>s</i> ₂ have been replaced with <i>s</i> ₃ |
| <code>subinword(<i>s</i>₁,<i>s</i>₂,<i>s</i>₃,<i>n</i>)</code> | <i>s</i> ₁ , where the first <i>n</i> occurrences in <i>s</i> ₁ of <i>s</i> ₂ as a word have been replaced with <i>s</i> ₃ |
| <code>substr(<i>s</i>,<i>n</i>₁,<i>n</i>₂)</code> | the substring of <i>s</i> , starting at <i>n</i> ₁ , for a length of <i>n</i> ₂ |
| <code>tobytes(<i>s</i>[,<i>n</i>])</code> | escaped decimal or hex digit strings of up to 200 bytes of <i>s</i> |
| <code>uchar(<i>n</i>)</code> | the Unicode character corresponding to Unicode code point <i>n</i> or an empty string if <i>n</i> is beyond the Unicode code-point range |
| <code>udstrlen(<i>s</i>)</code> | the number of display columns needed to display the Unicode string <i>s</i> in the Stata Results window |
| <code>udsubstr(<i>s</i>,<i>n</i>₁,<i>n</i>₂)</code> | the Unicode substring of <i>s</i> , starting at character <i>n</i> ₁ , for <i>n</i> ₂ display columns |
| <code>uisdigit(<i>s</i>)</code> | 1 if the first Unicode character in <i>s</i> is a Unicode decimal digit; otherwise, 0 |
| <code>uisletter(<i>s</i>)</code> | 1 if the first Unicode character in <i>s</i> is a Unicode letter; otherwise, 0 |
| <code>ustrcompare(<i>s</i>₁,<i>s</i>₂[,<i>loc</i>])</code> | compares two Unicode strings |
| <code>ustrcompareex(<i>s</i>₁,<i>s</i>₂,<i>loc</i>,<i>st</i>,<i>case</i>,<i>cslv</i>,<i>norm</i>,<i>num</i>,<i>alt</i>,<i>fr</i>)</code> | compares two Unicode strings |
| <code>ustrfix(<i>s</i>[,<i>rep</i>])</code> | replaces each invalid UTF-8 sequence with a Unicode character |
| <code>ustrfrom(<i>s</i>,<i>enc</i>,<i>mode</i>)</code> | converts the string <i>s</i> in encoding <i>enc</i> to a UTF-8 encoded Unicode string |
| <code>ustrinvalidcnt(<i>s</i>)</code> | the number of invalid UTF-8 sequences in <i>s</i> |
| <code>ustrleft(<i>s</i>,<i>n</i>)</code> | the first <i>n</i> Unicode characters of the Unicode string <i>s</i> |

| | |
|---|---|
| <code>ustrlen(<i>s</i>)</code> | the number of characters in the Unicode string <i>s</i> |
| <code>ustrlower(<i>s</i>[,<i>loc</i>])</code> | lowercase all characters of Unicode string <i>s</i> under the given locale <i>loc</i> |
| <code>ustrltrim(<i>s</i>)</code> | removes the leading Unicode whitespace characters and blanks from the Unicode string <i>s</i> |
| <code>ustrnormalize(<i>s</i>,<i>norm</i>)</code> | normalizes Unicode string <i>s</i> to one of the five normalization forms specified by <i>norm</i> |
| <code>ustrpos(<i>s</i>₁,<i>s</i>₂[,<i>n</i>])</code> | the position in <i>s</i> ₁ at which <i>s</i> ₂ is first found; otherwise, 0 |
| <code>ustrregxm(<i>s</i>,<i>re</i>[,<i>noc</i>])</code> | performs a match of a regular expression and evaluates to 1 if regular expression <i>re</i> is satisfied by the Unicode string <i>s</i> ; otherwise, 0 |
| <code>ustrregxra(<i>s</i>₁,<i>re</i>,<i>s</i>₂[,<i>noc</i>])</code> | replaces all substrings within the Unicode string <i>s</i> ₁ that match <i>re</i> with <i>s</i> ₂ and returns the resulting string |
| <code>ustrregxrf(<i>s</i>₁,<i>re</i>,<i>s</i>₂[,<i>noc</i>])</code> | replaces the first substring within the Unicode string <i>s</i> ₁ that matches <i>re</i> with <i>s</i> ₂ and returns the resulting string |
| <code>ustrregxs(<i>n</i>)</code> | subexpression <i>n</i> from a previous <code>ustrregxm()</code> match |
| <code>ustrreverse(<i>s</i>)</code> | the reverse of Unicode string <i>s</i> |
| <code>ustrright(<i>s</i>,<i>n</i>)</code> | the last <i>n</i> Unicode characters of the Unicode string <i>s</i> |
| <code>ustrrpos(<i>s</i>₁,<i>s</i>₂[,<i>n</i>])</code> | the position in <i>s</i> ₁ at which <i>s</i> ₂ is last found; otherwise, 0 |
| <code>ustrrtrim(<i>s</i>)</code> | remove trailing Unicode whitespace characters and blanks from the Unicode string <i>s</i> |
| <code>ustrsortkey(<i>s</i>[,<i>loc</i>])</code> | generates a null-terminated byte array that can be used by the <code>sort</code> command to produce the same order as <code>ustrcompare()</code> |
| <code>ustrsortkeyex(<i>s</i>,<i>loc</i>,<i>st</i>,<i>case</i>,<i>cslv</i>,<i>norm</i>,<i>num</i>,<i>alt</i>,<i>fr</i>)</code> | generates a null-terminated byte array that can be used by the <code>sort</code> command to produce the same order as <code>ustrcompare()</code> |
| <code>ustrtitle(<i>s</i>[,<i>loc</i>])</code> | a string with the first characters of Unicode words titlecased and other characters lowercased |
| <code>ustrto(<i>s</i>,<i>enc</i>,<i>mode</i>)</code> | converts the Unicode string <i>s</i> in UTF-8 encoding to a string in encoding <i>enc</i> |
| <code>ustrtohex(<i>s</i>[,<i>n</i>])</code> | escaped hex digit string of <i>s</i> up to 200 Unicode characters |
| <code>ustrtoname(<i>s</i>[,<i>p</i>])</code> | string <i>s</i> translated into a Stata name |
| <code>ustrtrim(<i>s</i>)</code> | removes leading and trailing Unicode whitespace characters and blanks from the Unicode string <i>s</i> |
| <code>ustrunescape(<i>s</i>)</code> | the Unicode string corresponding to the escaped sequences of <i>s</i> |
| <code>ustrupper(<i>s</i>[,<i>loc</i>])</code> | uppercase all characters in string <i>s</i> under the given locale <i>loc</i> |
| <code>ustrword(<i>s</i>,<i>n</i>[,<i>loc</i>])</code> | the <i>n</i> th Unicode word in the Unicode string <i>s</i> |
| <code>ustrwordcount(<i>s</i>[,<i>loc</i>])</code> | the number of nonempty Unicode words in the Unicode string <i>s</i> |
| <code>usubinstr(<i>s</i>₁,<i>s</i>₂,<i>s</i>₃,<i>n</i>)</code> | replaces the first <i>n</i> occurrences of the Unicode string <i>s</i> ₂ with the Unicode string <i>s</i> ₃ in <i>s</i> ₁ |
| <code>usubstr(<i>s</i>,<i>n</i>₁,<i>n</i>₂)</code> | the Unicode substring of <i>s</i> , starting at <i>n</i> ₁ , for a length of <i>n</i> ₂ |
| <code>word(<i>s</i>,<i>n</i>)</code> | the <i>n</i> th word in <i>s</i> ; <i>missing</i> ("") if <i>n</i> is missing |

| | |
|---|---|
| <code>wordbreaklocale(<i>loc,type</i>)</code> | the most closely related locale supported by ICU from <i>loc</i> if <i>type</i> is 1, the actual locale where the word-boundary analysis data come from if <i>type</i> is 2; or an empty string is returned for any other <i>type</i> |
| <code>wordcount(<i>s</i>)</code> | the number of words in <i>s</i> |

Trigonometric functions

| | |
|---------------------------------|---|
| <code>acos(<i>x</i>)</code> | the radian value of the arccosine of <i>x</i> |
| <code>acosh(<i>x</i>)</code> | the inverse hyperbolic cosine of <i>x</i> |
| <code>asin(<i>x</i>)</code> | the radian value of the arcsine of <i>x</i> |
| <code>asinh(<i>x</i>)</code> | the inverse hyperbolic sine of <i>x</i> |
| <code>atan(<i>x</i>)</code> | the radian value of the arctangent of <i>x</i> |
| <code>atan2(<i>y, x</i>)</code> | the radian value of the arctangent of <i>y/x</i> , where the signs of the parameters <i>y</i> and <i>x</i> are used to determine the quadrant of the answer |
| <code>atanh(<i>x</i>)</code> | the inverse hyperbolic tangent of <i>x</i> |
| <code>cos(<i>x</i>)</code> | the cosine of <i>x</i> , where <i>x</i> is in radians |
| <code>cosh(<i>x</i>)</code> | the hyperbolic cosine of <i>x</i> |
| <code>sin(<i>x</i>)</code> | the sine of <i>x</i> , where <i>x</i> is in radians |
| <code>sinh(<i>x</i>)</code> | the hyperbolic sine of <i>x</i> |
| <code>tan(<i>x</i>)</code> | the tangent of <i>x</i> , where <i>x</i> is in radians |
| <code>tanh(<i>x</i>)</code> | the hyperbolic tangent of <i>x</i> |
